1. a. Complete the final column of the table to find the total annual salary bill for TechScale.

b. Use your answer to question 1a to calculate the mean annual salary for the 15 employees in the company. Give your answer correct to the nearest $.

Show your calculations.

\[
\frac{680,000}{15} = \$45,333

2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

a. What mistake has John made?

He just saw the annual salary and saw that 80,000 was there twice what he didn't see was the number of people that get paid that much.

b. What is the correct mode of the salary?

$30,000

3. a. What is the median annual salary at TechScale?

$40,000

b. Explain how you figured it out.

Well I put the annual salary counting number of people in order 20, 20, 30, 30, 30, 30, 30, 40, 40, 50, 50, 50, 80, 80, 100 then just crossed out the numbers.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

mean

because it make people believe that you are going to get paid at 45,333 because that what most people are making.

5. Last year, TechScale did not do very well so Suzi decided not to pay herself any salary for a year.

Which of the averages (mean, median and mode) will not change?

2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

a. What mistake has John made?

John only looked at one column when he needed to find out how many of each salary is paid.

b. What is the correct mode of the salary?

$30,000

3. a. What is the median annual salary at TechScale?

$40,000

b. Explain how you figured it out.

I lined up the numbers in order then found the 7th number in line and that is the median.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

Median

Because, the measure of central tendency is higher than the others in this case.

5. Last year, TechScale did not do very well so Suzi decided not to pay herself any salary for a year.

Which of the averages (mean, median and mode) will not change?

2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

   a. What mistake has John made?
   
   This mistake was that he counted it only for one person and not for others.

   b. What is the correct mode of the salary?
   
   $150,000

3. a. What is the median annual salary at TechScale?
   
   $150,000

   b. Explain how you figured it out.
   
   First I put the numbers in order from smallest to largest and then found what number is in the middle of the set of numbers.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

   Explain your answer.

   The median number $150,000 shows about the averages at TechScale.

5. Last year, TechScale did not do very well so Suzi decided not to pay herself any salary for a year.

   Which of the averages (mean, median and mode) will not change?

   The mode and the median.

b. What is the correct mode of the salary?

$80,000

3. a. What is the median annual salary at TechScale?

$50,000

b. Explain how you figured it out.

In the ANNUAL SALARY column $100,000 is the largest and $20,000 is the smallest, then you go to the second smallest and biggest and so on till you get to the middle.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

Total 800000

1. a. Complete the final column of the table to find the total annual salary bill for TechScale.

b. Use your answer to question 1a to calculate the mean annual salary for the 15 employees in the company. Give your answer correct to the nearest $.

Show your calculations.

$4533
2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

a. What mistake has John made?

He didn't look at the amount of people that made each salary. He just looked at what kind of job made it.

b. What is the correct mode of the salary?

$30,000

3. a. What is the median annual salary at TechScale?

$40,000

b. Explain how you figured it out.

I took the #'s + placed them from least to greatest + found the middle #.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

Mean

It has the highest #'s of the mean, med. + mode.

5. Last year, TechScale did not do very well so Suzi decided not to pay herself any salary for a year.

Which of the averages (mean, median and mode) will not change?

Median + mode

2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

a. What mistake has John made?

Because it is not how many make that much 180,000 4 30,000 5

b. What is the correct mode of the salary?

30,000

3. a. What is the median annual salary at TechScale?

150,000

b. Explain how you figured it out.

You just look and see

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

Explain your answer.

Because if you want people to work there, you use the most which is the median

2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

   a. What mistake has John made?

   I don't think he made a mistake, the mode is \( \$80,000 \).

   b. What is the correct mode of the salary?

   \( \$50,000 \)

3. a. What is the median annual salary at TechScale?

   \( \$50,000 \)

   b. Explain how you figured it out.

   I put the numbers in order from least to greatest and found the one in the middle.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

   Mean

   Because it shows you the average salary.

2. John looks at the table and says, “The mode of the salary at TechScale is eighty thousand dollars a year.”

   a. What mistake has John made?

   He said that there were 3.80's and only 1 of everything else but you actually have to look in the "Number of People" column to find that answer.

   b. What is the correct mode of the salary?

   $30,000

3. a. What is the median annual salary at TechScale?

   $40,000

   b. Explain how you figured it out.

   First you would start at the bottom and look how many people there are and you would take that many off the top until you get to the middle

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

   Explain your answer.

   There are 6 more salaries that are almost all double of 40 thousand but there are none close to it below 40.

$$\bar{X} = \frac{\sum X}{n} = \frac{680,000}{15} = \frac{45,333.3}{60} = 4533$$

Show your calculations.
2. John looks at the table and says, "The mode of the salary at TechScale is eighty thousand dollars a year."

a. What mistake has John made?

John just looked at the total pay for each position and thought that because 2 of the totals were $80,000 it was the mode when actually only 2 people make that much money.

b. What is the correct mode of the salary?

$30,000

3. a. What is the median annual salary at TechScale?

b. Explain how you figured it out.

I ordered the annual salaries from least to greatest and wrote each dollar amount the same number of times as the people need to make that much money. I then eliminated the number on the end until I found the number in the middle.

4. Which of the three averages, mean, median or mode, would you use to show that the average wage at TechScale is very good?

Explain your answer.

Because it is higher than the mode or median and gives the impression that the average pay is higher.

5. Last year, TechScale did not do very well so Suzi decided not to pay herself any salary for a year.

Which of the averages (mean, median and mode) will not change?
